Comments concerning proposed rulemakings

The freeze of 2021 outlined how badly Texas needs to upgrade and protect our gas lines for severe weather along with the need to connect to the rest of the U.S. grid system to keep Texas working. The freeze of 2021 was a travesty that should not have occurred and most certainly should Not occur again. These measures are a start and should not have loopholes to opt-out for those that are part of the critical supply line chain. Texas has chosen to not connect with the rest of the U.S. and should not only weatherize and prepare our Texas critical supply ines for the future but also connect with the rest of the U.S. to a grid that can keep on the power when we need it.
