Comments concerning proposed rulemakings

Some years ago, when I contacted the the commission regarding the terrible gas contracts that were then (and still are) in place with the monopoly gas gathering systems, I was told by Commissioners and staff that our "piddling" amount of gas that we produce in District 10 did not warrant their attention. Now, this same "piddling" amount of gas is "critical infrastructure". During the great freeze-up of a couple of years ago, we lost very little production from our relatively small (less that 250 mcf/d) wells until GAS PIPELINE PRESSURE ROSE AS A RESULT OF PLANT FAILURES. We cannot sell gas into high pipeline pressure at any time. The pipelines are so old, and have such poor maintenance, that the pipelines themselves place pressure limiting devices on our lines to prevent any gas sales when line pressure is too high. "Citical Infrastructure" begins at the plant, not and the many small wells that feed it. You do not have the people nor the expertise to administer the kind of micro-managed weatherization program that has been proposed. Please exclude gas wells producing less than 250 mcf/d since they are not likely to be in compliance anyway and you will just make an administrative nightmare for all concerned with no likelihood of a positive result for anyone except some new-hires at the RRC.
