Per 16TAC 3.65- I don't understand how a wet gas gatherer or producer in south Texas can be claimed as critical infrastructure. We all know, when it gets cold, wet gas will be the first thing to freeze off. We are in south Texas where normally the temperature barely get below freezing and all producers and gatherers do not winterize like the northern states. we have one 100 year freeze and we get pushed into some critical infrastructure category where most companies will not spend millions insulating to never see a freeze like this again probably in another 100 years. I don't think there was a lot thought process efforts put towards who is really critical infrastructure and where the state really needs to focus on to keep generation systems going for power.
